Techmango Technology Services

Projects

Query Builder- Techmango

- Designed and developed a dynamic query builder using Angular 14, enabling users to create complex SQL/NoSQL queries through an intuitive UI.
- Implemented real-time validation, live data preview, and multi-format export (JSON, CSV) to improve usability and reduce query errors.
- Optimized performance and error handling to efficiently process large datasets, ensuring smooth cross-device responsiveness.

Project Management Tool -Techmango

- Developed a feature-rich project management application using Angular 14 with UI/UX designed in Figma for an intuitive and user-friendly experience.
- Implemented core features including task management, progress tracking, team collaboration, and real-time updates to streamline workflows.
- Integrated RESTful APIs with Node.js and MongoDB for efficient data handling, along with secure authentication and authorization mechanisms.
- Ensured responsive, cross-device performance with optimized frontend architecture and error handling.

Dating Application - IsItKadhal

🔗 <https://play.google.com/store/apps/details?id=com.joey.isitkadhal&hl=ta>

- Designed and developed a location-based dating application using Node.js and MongoDB, enabling real-time user matching based on geolocation data.
- Implemented personalized match recommendations, real-time location tracking (Socket.IO), and scheduled jobs (Cron) for continuous data updates.
- Built an Angular 14 admin portal for user management, activity monitoring, and content moderation to streamline platform operations.
- Integrated secure authentication, optimized backend performance, and ensured a responsive, cross-device user experience.

Health Kit Application -GlucoSense

🔗 <https://glucosense.ai/>

- Designed and implemented a HealthKit-based application to evaluate user health scores (out of 10) using glucose levels, time-in-range, and stability metrics.
- Built a scalable backend with Node.js, TypeScript, MySQL, and Sequelize ORM, integrating Redis caching to improve performance and reduce response times.
- Implemented Cron jobs for automated data processing and periodic score calculations, enabling near real-time health insights.
- Integrated AWS S3 for storage, Firebase push notifications, and NodeMailer for user alerts, ensuring reliable communication and engagement.

Recruitment Application -Techmango

- Designed and developed a recruitment application using Angular 14 and Node.js to streamline end-to-end hiring workflows.
- Implemented interview scheduling, automated notifications, assessment tracking, and real-time updates to improve recruiter efficiency.
- Built a robust backend with PostgreSQL and Sequelize ORM for efficient data management and scalable operations.
- Ensured secure authentication, optimized performance, and delivered a responsive, cross-device user experience.

Brand Website -Stone Hands

🔗 <https://stonehands.in/>

- Built a responsive web application using React.js, following a Figma-based design system to ensure consistent UI/UX across devices.
- Developed modular, reusable components to improve scalability, maintainability, and overall application performance.
- Collaborated with designers and backend teams to integrate APIs and deliver seamless end-to-end functionality.
- Identified and resolved bugs across multiple modules, enhancing application stability and user experience.

News publishing website

🔗 <https://www.tampabay.com/>

- Developed an inbound feed framework to transform XML (RSS, ATOM, NITF) and JSON feeds into ArcXP Native Schema, enabling automated draft creation for editorial workflows.
- Implemented cron-based cleanup to remove drafts older than 14 days and integrated Wufoo form hooks to auto-generate articles for review.
- Integrated Google Tag Manager and Amazon Ads (via Google Ad Manager), and resolved a critical duplicate line rendering issue to improve content accuracy.
- Built a dynamic real estate feature using Leaflet.js to display distributor location metadata on interactive maps.
